

Regional OAR-related Activities through the end of May 2013

MARCH		
Activity	Schedule	Description
FR Notice proposing approval of Wyoming's adoption of 2010 EPA general conformity revisions into their SIP	Not court ordered but high priority.	EPA's 2010 general conformity revisions allow for sources that have SIP approved minor source permits to be exempt from a general conformity demonstration. The state and BLM both have a high interest in getting the 2010 revisions approved into the SIP so that the exemption can be made available for new oil and gas projects in the Upper Green River Basin ozone nonattainment area. Any new project after July 20, 2013, will be subject to providing a general conformity demonstration.
